

## Low Voltage Dimming Control 0-10V Low Voltage Dimming Control

#### **Package Contents**

- > Low Voltage Dimming Control with knob and mounting plate
- Mounting screws
- Wire nuts

### Operation

The 0-10 volt DC Low Voltage Dimming Control is for use with LED lighting products such as the LUXdrive<sup>™</sup> A009 BuckBlock<sup>™</sup>, A011 FlexBlock<sup>™</sup>, 9008 LuxStrip II<sup>™</sup>, A006 LuxStrip II<sup>™</sup>,

3021/3023 BuckPuck<sup>™</sup> LED drivers, and others compatible with a 0-10V current sinking control. Features logarithmic response and reverse polarity protection.

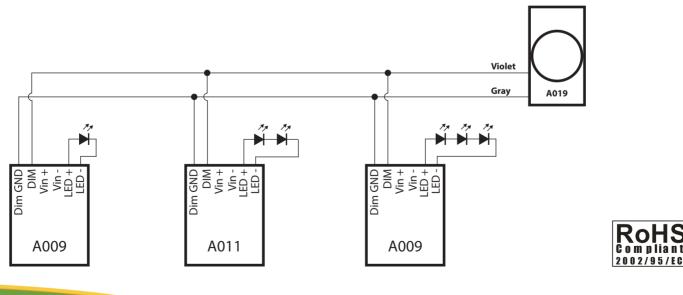

**WARNING:** Miswiring Low Voltage Dimming Control could cause permanent damage to dimmer. **Do Not** connect this control to line voltage.

**Do Not** connect with power applied. Maximum recommended operating current is 25mA.

# **Application Figures**

**A009 BuckBlocks<sup>™</sup>, A011 FlexBlocks<sup>™</sup>, or a combination of the two:** Up to 25 units can be dimmed on a single Low Voltage Dimming Control.

When the drivers being controlled are within a few feet of each other, daisy-chain wiring (shown below) is fine. When dimming distant modules, a star wiring pattern (each driver with it's own run of violet/gray wire back to the dimming control) and 18AWG wire is recommended.

### **Application Figures Cont.**

**9008 LuxStrip II<sup>™</sup> and A006 LuxStrip II<sup>™</sup>:** Control up to 50 strips with a single Low Voltage Dimming Control.

**3021/3023 BuckPucks<sup>™</sup> or 4015 BoostPucks<sup>™</sup>:** Control one to four BuckPucks<sup>™</sup> or BoostPucks<sup>™</sup> with a single Low Voltage Dimming Control. When controlling multiple units, connect the CTRL line of all units to the Dimming Control and connect **only one** REF line as shown below.
